

Documenting COVID-19 in NFIRS Incidents

When completing a NFIRS Incident Report where you may need to document the COVID-19 interaction, you can use your NFIRS Module to complete this task.

The COVID-19 user field will always be optional, but can be required on certain Incident Types

Once you have completed the basic page, you will notice the “Other” page being required.

In Other section, go to user fields and you will see the “COVID19_Response” tab.

When selected, it will display a series of questions to be complete as required or optional. Below the rules have been written to require certain fields based upon the Incident Type. Here is the script that we used in the example, `inlist(Incidentrecord.Inci_type,'311','321','322','323','351','352','353','354','355','356','357','361','363','362','364','365','371','372','554') AND Incidentrecord.Alm_date >= {03/23/2020}`

If someone answers NO to question 3, you will be required to answer why PPE was not worn.

You will also need answer whether supplies were used on the incident.

“Yes” will require a quantity to be entered for that specific item.

This user field can be used to document equipment used on this specific response.

Documenting Individual COVID-19 Exposure

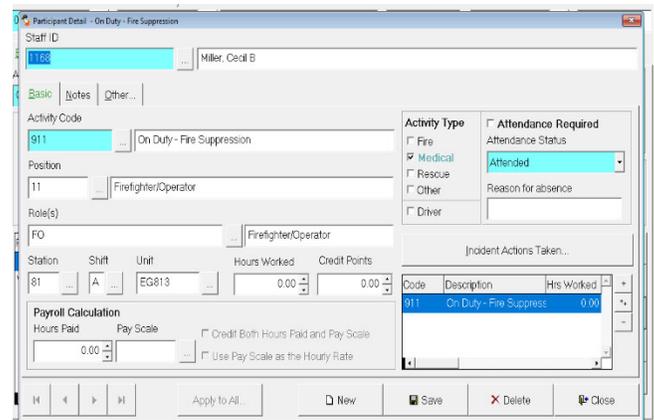

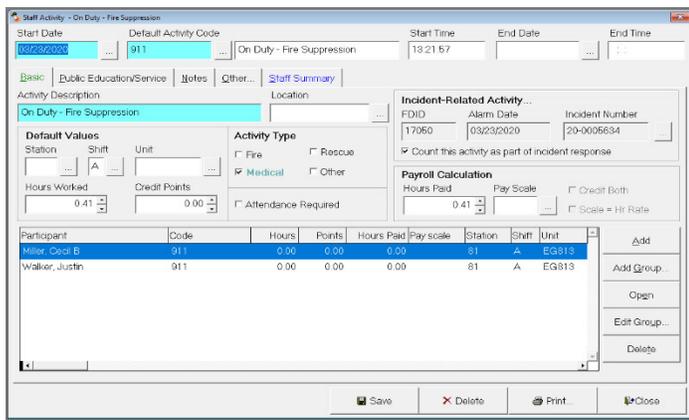

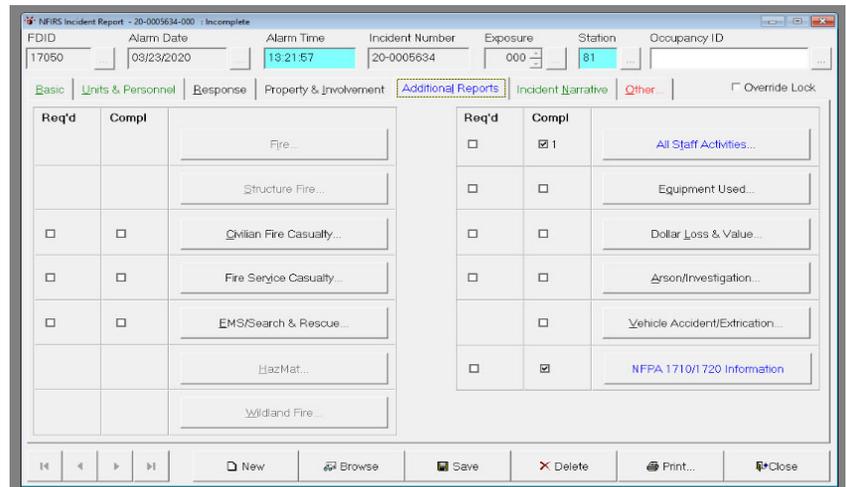

In addition to documenting the NFIRS Incident involving a possible COVID-19 Response, each member can document their individual exposure information as needed.

To complete this, go to the Additional Reports tab in the NFIRS Incident and select the All Staff Activities Button.

After selecting the All Staff Activities Button, Open the highlighted listed Staff Activity.

Once you have opened the Staff Activity, highlight the member being documenting and Open the member's detail screen.

Next select the Other Tab and select the User Fields Button to find the COVID-19 User Field.

Once the User Field is open for the member, you can answer the questions to document the exposure as needed for the member.
